

Alliance Cleaning Sustainable Client Solutions

10th February 2011

Our Sustainability Plan focuses on six areas:

1. combating climate change
2. environmentally friendly cleaning products
3. **sustainable solutions for our clients**
4. ethical cleaning practices
5. our standards
6. communication & engagement

The commitments on this document give you a sense of our **sustainable solutions for our clients**.

There are a number of services which we provide to clients, to help them handle potential problems whilst being conscious of the environment. The following are some examples. Please ask us for more.

Recycling service

We take all of the waste from some client's sites and recycle it for them, through a licensed waste disposal channel. We recycle segregated glass, paper, plastic, cardboard, batteries, food waste, furniture, confidential waste and vending cups.

Safe feminine hygiene

We use an environmentally friendly bio-degradable enzyme in our sanitary units. This is far safer and more dynamic than the standard chemicals used by some others in the industry. The airfresh fragrances are based on natural plant and herb extracts, and are non-aerosol based. The sanitary waste is also incinerated at waste-to-energy sites, rather than being sent to a landfill site.

Chemical free window cleaning

We use a Reach & Wash system, which allows higher, faster, safer and chemical free washing. The secret is highly filtered water which cleans and then dries without leaving spots or stains. A cleaning operative stood at ground level can clean windows up to 65 feet high by pole. This avoids the need to work at heights, making it a safe system to use.

Biodegradable carpet cleaning

We use biodegradable products in our carpet cleaners, so you can have exceptionally clean carpets and know that the products used are naturally and safely dispersed in the waste water.
